

DreamLine

Technology for people

Flexible, adaptable and efficient.

Bed and chair in perfect harmony.

DreamLine

Technology for people

The Dreamline is the perfect combination of bed and chair. All treatment requirements were considered in the design.

DreamLine gives unique flexibility and therefore offers both ease of use and efficient working for the nursing staff as well as comfort and well-being for patients.

Thanks to the large height-adjustable range, DreamLine can be brought low to the floor, increasing patient safety. In the working position, patients can be cared for at a comfortable working height, therefore contributing positively to the working environment of the staff.

The footrest enables a particularly relaxed sitting position. In addition, muscle cramps are unfortunately a frequent complication of certain treatments. A stable footrest offers patients the opportunity to press their feet against the footrest to counteract cramps.

The head-down position can be activated by foot switch on both sides. Staff therefore have both hands free to give immediate assistance.

Dreamline has a lying surface with removable plastic covers. The attractive design with closed, smooth surfaces improves handling during cleaning and disinfection. Two lifting columns provide stable and easy-to-clean construction with good accessibility.

Flexible multifunctional armrests

The **flexible multifunctional armrests** offer high patient comfort and optimal treatment positions.

The armrests can be adjusted to the desired position with just one lever and can even be rotated completely. It can be operated instinctively, making it easy to learn even for new staff.

The design and construction minimizes any personal injury.

Integrated safety was always at the forefront of the DreamLine development. DreamLine therefore has two lifting columns for safe height adjustment to preventing personal injury whilst under the lying surface during cleaning work, for example.

Thanks to the **innovative overload protection**, the armrest lowers when a load of more than 25 kg is applied to increase safety when getting in and out of the DreamLine. The overload protection also protects the armrest from future damage, prevents downtime and saves repair and replacement part costs.

CPR release levers are located on the left and right at the rear of the backrest.

Settings can be made quickly and precisely using the hand switches mounted either side.

The foot-side central brake is optimally positioned and can be reached safely.

The emergency button allows care staff to quickly initiate help in the event of an adverse reaction.

Cycling during dialysis has been shown to improve patients' coordination, strength and endurance and can have a positive effect on their well-being and quality of life.

The advantages of the side rail system are its compact design, which requires no space at the sides. For the safety of your patients, safety sides can be attached quickly and easily at four points on the DreamLine.

Technical data

Dimensions

Overall width, without armrests	90 cm
Overall length	230 cm
Mattress width	75 cm
Mattress length	215 cm
Total weight	123 kg

Adjustment options

Back section angle	0° – 75°
Seat section angle	0° – 25°
Leg section angle	0° – 25° (55°)
Footrest	23 cm
Height adjustment	53 – 93 cm

Safety

Safe working load	250 kg
Angle head-low position	– 12°
Time head-low position	15 sec
